

Mobile Commanders

Summary

Fady, Youssef Ramadan, and Youssef Mohamed are responsible for the Voclio mobile app, built with Flutter.

Their main focus is delivering a clean, intuitive, and voice-first user experience, making the app the central product that users interact with every day

Responsibilities

1. Core UI/UX

- Build a modern, simple, and consistent interface.
- Prioritize ease of use: quick task creation, clear lists, and smooth navigation.
- Voice-first experience: allow users to add and manage tasks using speech input.
- Provide dark/light mode and responsive design across devices.
- Ensure responsive design across different screen sizes (phones & tablets)

2. Clean Architecture

- Follow Clean Architecture principles for scalability and testability.
- Clear separation of concerns: presentation, domain, data layers.
- Easy maintainability for long-term growth.

3. Task Experience

- Clean task list with status indicators (pending, in-progress, completed).
- Quick actions: swipe to complete, edit, or delete.
- Visual priority indicators (high/medium/low).
- Support for sub-tasks and AI-generated breakdowns (displayed as steps).

4. Calendar & Scheduling

- Unified calendar view showing both tasks and Google Calendar events.
- Easy toggle between daily / weekly / monthly views.
- Smooth integration of rescheduled or prioritized tasks.
- Notifications & reminders directly from the calendar

5. Daily Summary & Motivation

- End-of-day screen with:
 - Completed tasks (✓).
 - Pending tasks (⚠).
 - Motivational note or suggestion.
- Clear and engaging UI to motivate users to stay consistent.

6. Usability & Performance

- Fast load times, offline-first where possible.
- Smooth animations and transitions (task check-off, calendar updates).
- Accessible design (readability, voice input, clear contrast).
- Optimized for responsive, smooth, and clean user experience.

7. Quality & Testing

- Focus on polished UI tests: screens, flows, navigation.
- Ensure app feels stable and professional with consistent behavior

Goal

Deliver a user-first mobile app that feels natural, fast, and reliable.

The app is the heart of Voclio, where all features—tasks, calendar, and AI summaries—come together in a beautiful, responsive, and clean architecture experience
